Re: Administrative Approval Application for 1640 5th Street

Dear Ms. Yeo:

We represent 1640 5th Street, LLC ("the Applicant") in connection with their proposal for a residential mixed-use project ("Project") at 1640 5th Street ("Site") in the City of Santa Monica ("City"). As described herein, the Project qualifies for benefits under the State Density Bonus Law ("SDBL") as recently amended by Assembly Bill ("AB") 1287, including a 30.5 percent density bonus, three development incentives that reduce Project costs, and unlimited waivers of development standards that physically accommodate the Project as proposed inclusive of the requested density bonus and incentives. The Applicant filed a preliminary application for the Project ("Preliminary Application") pursuant to Senate Bill 330 (as modified by Senate Bill 8) and paid all required permit fees on May 15, 2024. The Administrative Approval ("AA") application for the Project is attached to this letter and is being filed within the submittal deadline of November 11, 2024 (180 days) of the SB 330 application, therefore maintaining our vesting rights under this Entitlement Application.

I. Project Description

The Project proposes an 8-story residential building with a total of 132 units, including 15 deed restricted affordable units (5 Very Low, 5 Low Income and 5 Moderate-Income units), over three levels of subterranean parking with 132 vehicle parking spaces and 186 bicycle spaces (167 long-term and 19 short-term) on a 22,885-square foot lot.

II. Affordable Unit Requirement Project Density Bonus Requirements

To achieve the proposed density, the Project proposes to utilize benefits under the SDBL as recently amended by Assembly Bill ("AB") 1287 and implemented by Chapter 9.22 of the City's Zoning Code. As you know, the SDBL requires cities to grant density bonuses for housing projects that include a prescribed percentage of deed restricted affordable housing units, in addition to certain incentives that modify development standards to reduce Project costs and waivers of development standards to

physically accommodate the Project and incentives. Under the SDBL, if the Project provides 15 percent of its base units (i.e., the number of units permitted prior to the calculation of any bonus units) as Very Low-Income units, it would be entitled to a 50 percent density bonus, three incentives and unlimited waivers.

We note that units provided in compliance with the City's inclusionary affordable housing ordinance ("AHPP") (Zoning Code Chapter 9.64) will count toward the calculation of affordable units required to qualify for the 50 percent density bonus. Zoning Code Chapter 9.64 requires 5 percent of the Project's base units be provided as Very Low-Income units, 5 percent as Low-Income units and 5 percent as Moderate-Income units. The City considers all units provided in compliance with Zoning Code Chapter 9.64 as Very Low-Income units for the purposes of calculating benefits under the SDBL, and thus grants a full 50 percent density bonus, three incentives and unlimited waivers for compliance with Chapter 9.64.

III. Project Density

The City regulates residential density through a floor area ratio ("FAR") standard instead of a dwelling unit per acre standard. Thus, the SDBL requires that the developer provide a base density study that calculates the base density of the Project based on a project that complies with all applicable objective development standards. The Site is subject to a FAR of 4.0. The base density study for the Project demonstrates that the Project, if in compliance with all applicable objective standards, would have a base density of 101 units. Accordingly, to qualify for the 30.5 percent density bonus under SDBL, or a total of 132 units, the Project would only have to provide 10 percent of the units as Very-Low-Income. The Project however is providing 15 percent affordable units (for a 50 percent density bonus) consistent with the AHPP, which is in excess of the number of affordable units required under SDBL. Therefore, the Project provides 5 Very Low-Income units (5 percent of base units), 5 Low-Income units (5 percent of base units), and 5 Moderate-Income units (5 percent of base units). Although the project qualifies for a 50 percent density bonus under the AHPP (152 units), the Project proposes a 30.5 percent density bonus (132 units).

IV. Project Incentives and Waivers

Because the Project provides the requisite number of affordable units under SDBL and the AHPP, it also qualifies for three development incentives and an unlimited number of waivers. The City must grant incentive requests if they create identifiable and actual cost reductions necessary to provide for affordable housing costs; and they City must waive development standards if they have the effect of physically precluding the construction of the qualifying project with the density bonus and incentives requested. Under AB 1287, however, the City can no longer require financial documentation to substantiate the cost reductions required for an incentive request. In this section we identify the Project's requested incentives and waivers and explain how they qualify as such.

a. Project Incentives

The Project proposes the following three incentives: 1) reduction of the requirement to provide 10 percent of the Project's market rate and affordable units as three-bedroom units to 5 percent (on-menu incentive); 2) reduction of required long term bicycle parking from one to 0.90 (10% reduction) spaces per unit; and 3) increase in the DCP maximum parking requirement for market rate units above .50 space per unit. The reduction of the required bicycle parking spaces would reduce construction costs

by requiring less floor area in the subterranean parking structure and less bicycle racks. The average bicycle parking space requires approximately 15 square feet and costs approximately $150 per square foot, in addition to $550 per space for the bicycle racks. Finally, the allowance for an increase in the maximum parking requirement would allow for the Project to provide ample parking for the residents which the applicant believes is critical to lease up the units and ensure the overall economic viability of the Project.

b. Project Waivers

The Project proposes the following four waivers: 1) an increase in FAR from 4.0 to 4.84; 2) an increase in height from 84 feet to 85 feet; 3) an increase of the 1.7:1 height to width ratio for the podium level courtyard from 1.71 to 2.0' and 4) a reduction in the minimum upper level stepbacks above 60 feet for 35% of the front façade area. These waivers are required to physically accommodate the Project's proposed density, including the 30.5 percent density bonus under SDBL, and the incentives requested identified above.

Thank you for your time and attention on this matter. Please do not hesitate to contact me directly, or my colleague Michael Rocque at (520) 360-7182 or michael@rpnllp.com, with any questions or comments on the application or information provided in this letter.

Sincerely,

Dave Rand

Affordable Housing Production Program Acknowledgement

In accordance with SMMC 9.64, all multi-unit projects involving the construction of two or more market rate units shall comply with the affordable housing obligations as set forth in SMMC 9.64.040. From the options listed below, please indicate how the Project will comply with the provisions of SMMC 9.64.040 (check all that apply):

- ☒ On-Site Option (SMMC 9.64.050)
- ☐ Affordable Housing Fee (SMMC 9.64.070)
- ☐ Off-Site Option (SMMC 9.64.060)
- ☐ Land Acquisition (SMMC 9.64.080)

On-site affordable units and affordability level

# 2 bedrooms	0	0	0	0
# 3 bedrooms	0	0	0	0
Proposed Location: n/a				

SUBMITTAL REQUIREMENTS

Off-Site Option

Pursuant to SMMC 9.64.060(D) & (H) the following documentation is required for providing affordable housing units off-site (receiver site). Off-site units may not be located within the "Affordable Housing Prohibition Area" as depicted in SMMC 9.64.060(A)

☐ D. The multiple-unit project applicant shall identify an alternate site suitable for residential housing which the project applicant either owns or has site control over (e.g., purchase agreement, option to purchase, lease) subject to City review to ensure that the proposed development is consistent with the City's housing objectives and projects.

☐ H. The off-site affordable units shall be owned in whole or part and operated by a nonprofit affordable housing provider for the life of the project, and the Final Construction Permit Sign Off or Certificate of Occupancy for the off-site affordable units shall be issued prior to or concurrently with the market-rate housing project.

Density Bonus

■ Pursuant to SMMC 9.22 projects providing affordable housing may be eligible for a density bonus and additional incentives, concessions, waivers, and/or reductions of development standards. Describe your density bonus request below; provide additional sheets if necessary to show calculations or explain requested incentives, concessions, waivers and/or reductions.

Affordable units proposed on-site 15 %

Density bonus qualified for 30.5 %

Density bonus proposed _____ %

Base Density 101 units/SF
See SMMC 9.22.050(C)(2) for non-residential parcels

■ Pursuant to SMMC 9.22.050(C) & (D), applicant shall provide a base density study and a density bonus calculation for the proposed Project.

☐ Describe requested incentives and concessions below; if not listed in SMMC 9.22.060(B) or (C), applicant is required to provide reasonable documentation to establish eligibility for the requested incentives and concessions, as described in SMMC 9.22.080(A)(3).

1. See attached cover letter
2.
3.
4.
5.

☐ Describe requested waivers or reductions of development standards below. Pursuant to SMMC 9.22.080(A)(4) applicant is required to provide reasonable documentation to establish eligibility for the requested waiver or reduction of development standards.

1. See attached cover letter
2.
3.
4.
5.

SUBMITTAL MATERIALS

Project Submittal

■ All materials must be submitted digitally. Prepare one PDF file with the **SIGNED** application and all supplemental materials and a second PDF file of the Project Plans. Resolution should allow legible printing at 11" x 17".

Air Quality Assessment

■ Applicants of new residential development within the Air Quality Assessment Zone shall be required to include design features necessary to reduce resident exposure to diesel particulate matter (DPM). Applicants shall be responsible for the preparation of a brief technical memorandum that describes the effectiveness of the selected measures in reducing DPM emissions below SCAQMD cancer risk thresholds of 10 cancer cases per million (1.0 x 10-5).

Application Fees

■ The payment of an application fee is required at time of submittal. Contact City Planning at 311@santamonica.gov for applicable fees.

Digital Project Plans

■ Plans for Planning Permits must include:

- Detailed project description and vicinity map.
- Existing site plan showing all existing improvements and structures.
- Site plan showing compliance with development standards, applicable setbacks etc.
- Fully dimensioned floor plans indicating square feet and interior layout. Please show floor area calculations. In the case of remodeling, existing and proposed dimensioned floor plans, as well as a demolition plan, are required.
- Dimensioned exterior elevations of the proposed Project and adjacent existing buildings. Exterior elevations must show the height of each building dimensioned from Average Natural Grade (ANG), Segmented Average Natural Grade (SANG), or Theoretical Grade (TG), as applicable. Height calculation methodology must be shown as described in SMMC 9.04.050, Measuring Height. Elevation measurements, accompanied by a survey of existing site conditions, must be certified by a licensed surveyor or engineer. In the case of additions to existing buildings, all exterior elevations of both the addition and the existing building are required.
- Cross-section and longitudinal sections calling out building heights, height projections, and all building levels in relation to ANG, ANG, or TG.
- Show size and location of any exterior mechanical equipment on both site plan and elevations. Indicate existing buildings on adjacent parcels and their zoning and use (commercial, residential, etc.)
- Other such information, drawings, plans, and renderings that may be helpful.

Community Meeting *(See page 7)*

■ Signed declaration certifying that a community meeting with property owners and tenants within a 750-foot radius of the proposed Project has been conducted prior to submittal of this application, pursuant to SMMC 9.39.050(A).

****Application will not be accepted until this requirement is complete. ****

PERMIT APPLICATION SUBMITTAL REQUIREMENTS

Rent Control Status Form

■ Contact Rent Control: rentcontrol@santamonica.gov.

Replacement Unit Determination Form

☐ Pursuant to the Housing Crisis Act of 2019 (SB8/SB330), housing development projects on sites that have demolished dwelling units in the last 5 years or proposing the demolition of dwelling units must complete and provide a supplemental Replacement Unit Determination Form.

Demolition Permit Acknowledgement (For Structures 40 Years or Older)

Pursuant to SMMC 9.25.040(E) a demolition permit is required for demolition of any building or structure on the property (primary or accessory structure). For buildings or structures constructed more than 40 years ago no entitlement will be accepted until at least 75 days after a complete demolition permit application is accepted. A Landmark or Structure of Merit Designation Application may be filed during this 75-day review period, and the Landmarks Commission may subsequently designate the property (structure and/or parcel) as a Landmark, Landmark Parcel, or Structure of Merit in accordance with and based on findings established in SMMC 9.56 and 9.58.

☐ My property contains a structure (or structures) 40 years old or older and the proposed development of this property will require a demolition permit.

■ My application for a demolition permit has been submitted and, no formal historic designation application has been filed during the 75-day review period.

****Application will not be accepted until this requirement is complete. ****

Acknowledgement Regarding Use of Rental Units

■ In accordance with Chapter 6.22 Residential Leasing Requirements:

i. All leases shall be made only to a tenant who is a natural person or to tenants who are natural persons;
ii. All leases shall be made only to a tenant or tenants who, regardless of the term of occupancy, intend to make the rental unit the tenants' primary residence as defined by SMMC 6.22.020(C)
iii. All prospective tenants shall be offered a written lease which has a minimum term of one (1) year; and
iv. All units shall be leased as unfurnished units.

Transportation Demand Management

■ A PDF copy of a draft Transportation Demand Management (TDM) Plan, if applicable, in accordance with the requirements of SMMC Section 9.53.

A draft TDM Plan is required if the Project meets the requirements of its respective project type:

- *Residential Projects: 16 or more residential units.*
- *Mixed-use Projects: 16 or more residential units with any associated nonresidential floor area or 7,500 sf or more of nonresidential floor area with any number of residential units.*

PERMIT APPLICATION SUBMITTAL REQUIREMENTS

OAKS INITIATIVE DISCLOSURE FORM

***** Required for all Applications *****

Pursuant to City Charter Article XXII, The Taxpayer Protection Amendment of 2000, the applicant is required to disclose all of its trustees, directors, partners, officers, and those with more than a ten percent (10%) equity, participation or revenue interest in Applicant / Contractor.

Identify the names of the following individuals

Applicant / Contractor:

1640 5th Street, LLC

Trustees, directors, partners, officers of the Applicant / Contractor (attach additional sheets if necessary):

See attached LLC Agreement

Those with more than a 10% equity, participation or revenue interest in Applicant / Contractor (attach additional sheets if necessary):

DECLARATION CERTIFYING COMMUNITY MEETING

As required by SMMC 9.39.050(A), prior to submittal of an Administrative Approval application, project applicant shall conduct a virtual community meeting. The meeting shall be noticed and conducted pursuant to the following:

☑ Create a project website accessible to the public providing the following information:
- Project description including, but not limited to, commercial and residential floor area, height, number of market rate and affordable units, and number of parking spaces.
- Project plans including, but not limited to, site plan, floor plans, elevations, renderings.
- Date & time of community meeting, along with clear instructions on how to participate.
- Applicant contact information provided on the home page of the website.

☑ 14 days prior to the meeting, applicant shall mail notifications inviting property owners and tenants within a 750-foot radius of the proposed project site and all neighborhood organizations to the meeting. Notifications must include, but are not limited to, the following:
- Project website address (must be active/complete at time of mailing)
- Applicant contact information (including a monitored email address active at time of mailing)
- Time, date, and instructions on how to attend the meeting.

☑ Notify City Planning Division 14 days prior to the meeting: Send an email to planningcomment@santamonica.gov. Please include the community meeting date/time, link to project website, and copy of the mailed notification.

☑ Post project site 14 days prior to the meeting (see page 8).

☑ Provide for a minimum capacity ensuring that all noticed parties may attend.

☑ Meeting must be scheduled during the following timeframe: Monday through Thursday during the hours of 6:00 PM to 9:00 PM. The meeting cannot be hosted at the same time as a City Council or Planning Commission meeting. An alternative proposal may be approved by the Community Development Director if it can be demonstrated that the alternative would increase community access to the meeting.

☑ Present one or more schematic design options for the proposed project.

☑ Allow public comment on the proposed project from time notifications are sent to at least one week after the community meeting.

☑ Incorporate comments from the meeting and online comment period into the proposed project design to the extent feasible.

At time of application submittal, the following must be provided to show proof of community meeting:

☑ Project website: https://www.1640fifth.com/

☑ Community meeting information:

- Date: July 8, 2024
- Time: 6:00 PM
- Meeting link: https://urldefense.com/v3/__https://us06web.zoom.us/j/84889511878?pwd=Y0OQMybQqJ4TDz9cBMhgUoHwGUES3T.1__;!!BeJLKi7IT7G1Gk-P1kuMua!
- Photo of site posting.

☑ Address list of all property owners and tenants within a 750-radius of the proposed project.

☑ Copy of written notice sent to property owners and tenants.

☑ Schematic design option(s) presented at community meeting.

☑ Written summary of all comments received at community meeting and during comment period and a narrative of how and if comments were addressed in the proposed project.

I hereby certify that I am the Applicant of the subject project and that I have reviewed the subject Community Meeting Declaration and declare, under penalty of making a false declaration, that to the best of my knowledge and belief, the information provided within this application is true, correct, complete, and made in good faith.

Attn: Dave Rand

Re: 1640 5th Street - Highway Health Risk Exposure Evaluation

Mr. Rand:

Per your request, Air Quality Dynamics has prepared a Highway Health Risk Exposure Evaluation to assess on-road mobile source emissions generated from the California Interstate 10 (Santa Monica) freeway to identify Project design features which will reduce exposure to diesel particulate matter (DPM) below the cancer risk threshold of 10 in one million (10E-06) established by the South Coast Air Quality Management District (SCAQMD).

A review of the Project's property profile indicates that the site is located within the City of Santa Monica's Air Quality Assessment Zone (AQAZ) whereby interior air quality protection is required pursuant to mitigation measure AQ-1 outlined in the City of Santa Monica's 6th Cycle 2021-2029 Housing Element Update. Of most relevance are enhanced heating, ventilation and air conditioning (HVAC) filtration requirements which must be identified and applied to Project design to reduce DPM exposures. Although stated as "not required" building design and massing should also consider locating outdoor amenities such as courtyards and common areas away from freeway emission sources.

In response to the above AQAZ guidance, the exposure evaluation provides discrete HVAC building filtration requirements in a manner consistent with the American Society of Heating, Refrigerating and Air Conditioning Engineers (ASHRAE) Standard 52.2 for the 0.3 to 1.0 micrometer (□m) particle size range. Additionally, as DPM does not have acute exposure thresholds (i.e., 1 and 8-hour), an evaluation of criteria pollutants generated from mobile source activity (i.e., carbon monoxide and nitrogen dioxide), which have short term ambient air quality thresholds, were assessed to address outdoor exposures to characterize the impact to residents who utilize the Project's available outdoor amenities.

The assessment and dispersion modeling methodologies used in the preparation of this report were composed of all relevant procedures presented by the U.S. Environmental Protection Agency, California Environmental Protection Agency and SCAQMD. The methodologies and assumptions offered under this regulatory guidance were used to ensure that the exposure evaluation effectively quantified pollutant exposures associated with the generation of contaminant emissions from adjacent mobile source activity. This report summarizes the protocol used to evaluate contaminant exposures and presents the results of the Highway Health Risk Exposure Evaluation.

Site Description

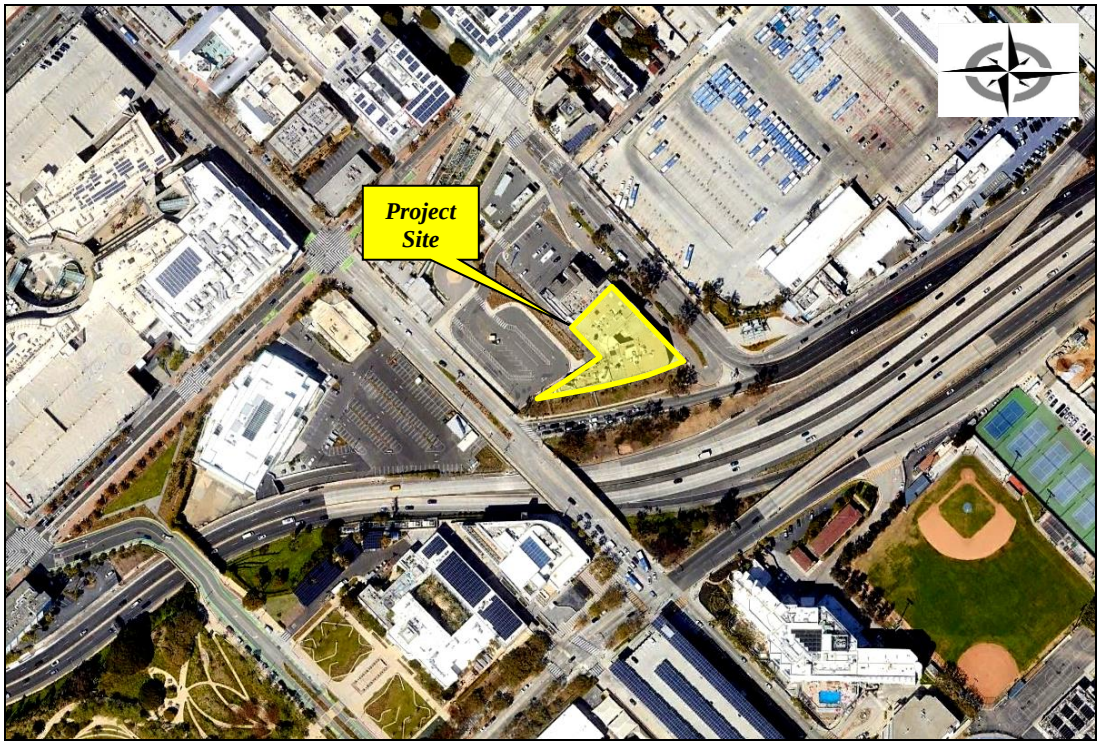
The Project proposes the demolition of an existing 27,176 square foot commercial office building to accommodate the construction of a residential development consisting of 132 dwelling units (117 market rate and 15 dedicated to affordable housing). The dwelling units would be distributed throughout 8 stories across 123,600 square feet of gross floor area with available subterranean parking. Ground floor, second level patio and roof deck amenity space are additionally proposed.

Notwithstanding the City of Santa Monica's AQAZ requirements, the Project is subject to the incorporation of enhanced building filtration equal to or greater than a minimum efficiency reporting value (MERV) rating of 13 in accordance with the energy efficiency standards of the California Building Standards Code (Title 24, Part 6).

The Project is located at 1640 5th Street situated on an approximate 0.51 acre parcel with an adjoining 4 story office building to the north, California Interstate 10 freeway to the south, Big Blue Bus transit facility to the east and surface parking to the west. The site is located within the City of Santa Monica's Downtown Community Plan (DCP) Transit Adjacent (TA) - Gateway Master Plan Area.

It is anticipated that the Project will begin construction in the second quarter of 2026 with completion and subsequent occupancy within the first quarter of 2028. Figure 1 presents an aerial photograph of the Project location and adjoining community.

Figure 1
Site Location /Vicinity Aerial Photograph



Source Identification

The California Department of Transportation (Caltrans) Performance Measurement System (PeMS) collects and maintains traffic information for roadways traversing the California state highway system. PeMS is a data management system that stores and processes raw data in real time. PeMS can be accessed via an internet browser and contains a series of built-in analytical capabilities to support the elucidation of a variety of analytical scenarios allowing users to query both current and archived freeway performance data. For this analysis, aggregate time series data for 2019 was utilized as the most recent (pre-pandemic) and complete calendar year to represent traffic volume (flow) and vehicle speeds to accommodate an assessment of chronic (long term), and short duration (i.e., 1 and 8-hour) exposures.

Caltrans also collects and maintains traffic volume counts for freeway on/off ramps and adjoining segments. Due to the paucity of this information in the PeMS database, the Traffic and Vehicle Data Systems Unit database was reviewed to obtain representative traffic volumes for these discrete roadway segments.

Based upon arithmetic average traffic flows identified in the PeMS database and population profiles noted above, average hourly traffic volumes for the east and westbound California Interstate 10 (Santa Monica) freeway segments located at postmile 2.33 (Lincoln Boulevard) were identified. Reported ramp volumes were averaged to produce an hourly traffic profile. Table 1 presents the identified hourly traffic volumes.

Table 1
Average Hourly Traffic Volumes

Roadway Segment	Traffic Volumes	
	All	Diesel
California Interstate 10 Eastbound	2417	83
California Interstate 10 Westbound	1876	64
Southbound On 4th Street	846	29
Northbound Off 4th Street	1125	39
Southbound Off Lincoln Boulevard	144	5
Northbound On Lincoln Boulevard	175	6

Source Characterization

In urban communities, vehicle emissions contribute significantly to localized concentrations of air contaminants. Typically, emissions generated from these sources are characterized by vehicle mix, the rate pollutants are generated during the course of travel and the number of vehicles traversing the roadway network.

Currently, emission factors are generated from a series of computer-based programs to produce a composite emission rate for vehicles traveling at various speeds within a defined geographical

area or along a discrete roadway segment. To account for the emission standards imposed on the California fleet, the California Air Resources Board (CARB) has developed the EMFAC2021 emission factor model. EMFAC2021 was utilized to identify pollutant emission rates for diesel particulates (DPM), carbon monoxide (CO) and nitrogen oxide (NO_x) compounds. To produce a representative vehicle fleet distribution, the assessment utilized CARB's Los Angeles County (South Coast) population estimates for the proposed Project occupancy year of 2028. Table 2 lists the identified fleet mix considered in the evaluation.

Table 2
Vehicle Fleet Mix Profile

The MROUND function in Excel, which returns a number rounded to the nearest multiple, was utilized to produce average route speeds based upon the arithmetic average of hourly speeds reported in the PeMS database. For the east and westbound freeway segments, average route speeds of 60 miles per hour were identified. For on and off ramps, the modal emission algorithm from the California Line Source Dispersion Model Caline4 was used to account for both accelerating and decelerating vehicles along these roadway segments. For this evaluation, initial route speeds of 45 and 5 miles per hour were utilized to characterize ramp acceleration and deceleration modes, respectively.

Attachment C presents the emission rate calculation worksheets for the freeway segments considered in the evaluation.

Exposure Quantification

In order to assess the impact of emitted compounds on individuals who reside within and/or access common areas throughout the Project area, air quality modeling utilizing the American Meteorological Society (AMS)/EPA Regulatory Model (AERMOD) was performed to assess the downwind extent of freeway mobile source emissions located within 1,000 feet of the project site. AERMOD is a steady-state Gaussian plume model applicable to directly emitted air pollutants that employs best state-of-practice parameterizations for characterizing meteorological influences and atmospheric dispersion. AERMOD is the U.S. Environmental Protection Agency's guideline model for the assessment of near-field pollutant dispersion.

The model offers additional flexibility by allowing the user to assign initial vertical and lateral dispersion parameters for sources representative of a localized mobile fleet. For this evaluation,

the volume source algorithm was utilized to model the emissions generated from mobile source activity and were represented as approximate sources whereby separation distances did not exceed twice the width of the roadway link and maintained a lateral dimension plus one meter to the nearest receptor location. Vertical (sigma z) dispersion parameters were developed for each source location by approximating mixing zone residence time and quantifying the initial vertical term as performed in the California Line Source Dispersion Model Caline3. The horizontal (sigma y) parameters were generated by dividing the source separation distance by a standard deviation of 2.15.

The Ambient Ratio Method 2 (ARM2), which is based on an evaluation of NO_2/NO_x ratios from the U.S. Environmental Protection Agency's Air Quality System (AQS) record of ambient air quality data, was used to assess the impacts of NO_2. The U.S. Environmental Protection Agency reports that results from ARM2 simulations are more conservative relative to the Tier 3 methods associated with the ozone limiting (OLM) and plume volume molar ratio (PVMRM) methods currently recommended in the Guideline on Air Quality Models, Appendix W. For this analysis, the ARM2 default minimum and maximum NO_2/NO_x ratios of 0.5 and 0.9 were incorporated into the model simulation.

The modeling analysis also considered the spatial distribution of mobile source activity in relation to the proposed site. To accommodate a Cartesian grid format, direction dependent calculations were obtained by identifying the universal transverse mercator (UTM) coordinates for each volume source location. On-site receptors were uniformly placed to provide coverage across the identified Project boundary commensurate with residential uses and areas of common access. Terrain height adjustments were incorporated into the modeling exercise to account for the discrepancy in source elevations and the identified grade plane across the Project site. Graphical representations of the mobile source and receptor grid networks are presented in Figures 2 and 3.

Figure 2
Mobile Source Grid Network

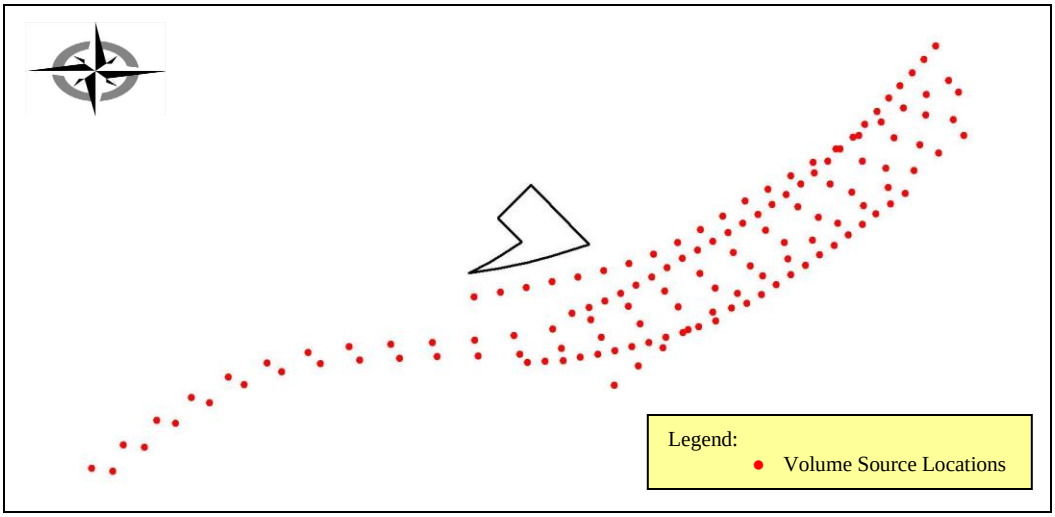

Figure 3
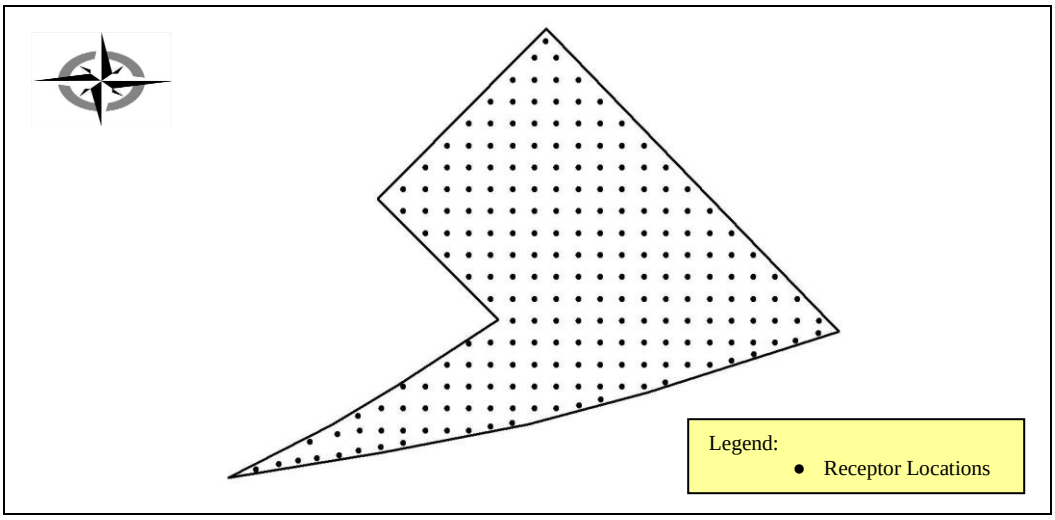
Receptor Grid Network



Air dispersion models require additional input parameters including pollutant emission data and local meteorology. Due to their sensitivity to individual meteorological parameters such as wind speed and direction, the U.S. Environmental Protection Agency recommends that meteorological data used as input into dispersion models be selected on the basis of relative spatial and temporal conditions that exist in the area of concern. In response to this recommendation, meteorological data from the SCAQMD Santa Monica Airport monitoring station (Source Receptor Area 2) which is located 2.47 miles northeast of the Project site was used to represent local weather conditions and prevailing winds. For CO and NO_2 exposures, five years of available AERMOD meteorological data were utilized to identify the highest pollutant concentrations. For DPM exposures, maximum concentrations were produced by incorporating all five years of available data.

In a manner consistent with the City of Santa Monica's Health Risk Assessment Report (June 2021), the dispersion analysis incorporated time-of-day adjustments (HROFDY) to the average vehicle counts presented above to accommodate variable traffic flow as reported in the PeMS database. Vehicle time-of-day adjustment factors for the east and westbound freeway segments are presented in Attachment D. A dispersion model input table is provided in Attachment E. A listing of model output summary files are provided in Attachment F.

Risk Characterization

For chronic exposures, concentration estimates for residential receptors are considered static whereby exposures are assumed to be continuous. Short duration exposures apply to all receptor locations including common areas such as outdoor patios and related amenities since it is reasonable to assume that an individual could be present for periods of one to eight hours.

Carcinogenic Chemical Risk

Carcinogenic compounds are not considered to have threshold levels (i.e., dose levels below which there are no risks). Any exposure, therefore, will have some associated risk. As a result, the SCAQMD has established a maximum incremental cancer risk which meets or exceeds a threshold of 10 in one million (10E-06) for projects prepared under the California Environmental Quality Act (CEQA). This threshold is also consistent with the State of California as a level posing no significant risk for exposures to carcinogens regulated under the Safe Drinking Water and Toxic Enforcement Act (Proposition 65).

Health risks associated with exposure to carcinogenic compounds can be defined in terms of the probability of developing cancer as a result of exposure to a chemical at a given concentration. Under a deterministic approach (i.e., point estimate methodology), the cancer risk probability is determined by multiplying the chemical's annual concentration by its unit risk factor (URF). The URF is a measure of the carcinogenic potential of a chemical when a dose is received through the inhalation pathway. It represents an upper-bound estimate of the probability of contracting cancer as a result of continuous exposure to an ambient concentration of one microgram per cubic meter ($\mu g/m^3$) over a 70-year lifetime. The URF utilized in the assessment and corresponding cancer potency factors were obtained from the *Consolidated Table of OEHHA/ARB Approved Risk Assessment Health Values*.

To effectively quantify dose, lifetime risk values were adjusted to account for an exposure frequency of 350 days per year for a period of 30 years (i.e., 0.25 years for the third trimester, 2 years for ages 0 to 2 years, 14 years for ages 2 to 16 years and 14 years for ages 16 to 30 years).

Point estimates for daily breathing rates recommended by CARB and the California Air Pollution Control Officers Association (CAPCOA) for chronic exposures representing the 95th percentile of 361 L/kg-day, 1090 L/kg-day, and the 80th percentile of 572 L/kg-day and 261 L/kg-day for the identified age groups were utilized and incorporated into the following dose algorithm.

$$Dose_{air} = C_{air} \times \{BR/BW\} \times A \times EF \times 10^{-6}$$

Where:

$Dose_{air}$	=	*dose through inhalation (mg/kg/day)*
C_{air}	=	*concentration of contaminant in air ($\mu g/m^3$)*
$\{BR/BW\}$	=	*daily breathing rate normalized to body weight (L/kg body weight/day)*
A	=	*inhalation absorption factor (unitless)*
EF	=	*exposure frequency (days/365 days)*
10^{-6}	=	*micrograms to milligrams conversion*

The above inhalation dose estimates, corresponding age sensitivity factors (i.e., 10 for the third trimester and ages 0 to 2 years, 3 for ages 2 to 16 years and 1 for ages 16 to 30 years) and residential fractional adjustments (i.e., 0.85 for the third trimester and ages 0 to 2 years, 0.72 for ages 2 to 16 years and 0.73 for ages 16 to 30 years) were incorporated into the following

equation to produce carcinogenic risk estimates for ages commensurate with the reported exposure durations.

$$Risk_{inh} = Dose_{air} \times CPF \times ASF \times ED/AT \times FAH$$

Where:

$Risk_{inh}$	=	*inhalation cancer risk*
$Dose_{air}$	=	*daily inhalation dose (mg/kg/day)*
CPF	=	*inhalation cancer potency factor* ($mg/kg/day^{-1}$)
ASF	=	*age sensitivity factor for the specified age group (unitless)*
ED	=	*exposure duration for specified age group (years)*
AT	=	*averaging time (years)*
FAH	=	*fraction of time at home (unitless)*

Table 3 presents the carcinogenic risk estimates for the maximum exposed residential receptors associated for each floor level and associated MERV filtration rating. Attachment A provides graphical representations for the first and second floor levels which depict the individual dwelling units requiring MERV 14 filtration. Attachment B, Tables B1 through B32 present the calculation worksheets used to derive carcinogenic risk estimates for the maximum exposed residential receptors for each identified floor level.

Table 3
Carcinogenic Risk / Maximum Exposed Residential Receptors

Floor Level	MERV Filtration	Risk
First	14	5.5E-06
Second	14	5.1E-06
Third	13	8.0E-06
Fourth	13	5.2E-06
Fifth	13	3.3E-06
Sixth	13	2.2E-06
Seventh	13	1.5E-06
Eighth	13	1.0E-06

Note: 5.5E-06, 5.1E-06, 8.0E-06, 5.2E-06, 3.3E-06, 2.2E-06, 1.5E-06 and 1.0E-06 denote cases of cancer of 5.5, 5.1, 8.0, 5.2, 3.3, 2.2, 1.5 and 1.0 in one million (1,000,000) individuals exposed.

Criteria Pollutant Exposures

The State of California has promulgated strict ambient air quality standards for various pollutants. These standards were established to safeguard the public's health and welfare with specific emphasis on protecting those individuals susceptible to respiratory distress, such as asthmatics, the young, the elderly and those with existing conditions which may be affected by increased pollutant concentrations. However, research has shown that unhealthful respiratory responses occur with exposures to pollutants at levels that only marginally exceed clean air standards. Table 4 presents the California Ambient Air Quality Standards (CAAQS) for the criteria pollutants considered in the assessment.

Table 4
California Ambient Air Quality Standards

Pollutant	Standard	Health Effects
Carbon Monoxide (CO)	>9.0 ppm (8-hr avg.) >20.0 ppm (1-hr avg.)	1) Aggravation of angina pectoris and other aspects of coronary heart disease. 2) Decreased exercise tolerance in persons with peripheral vascular disease and lung disease. 3) Impairment of central nervous system functions. 4) Possible increased risk to fetuses.
Nitrogen Dioxide (NO_2)	>0.18 ppm (1-hr avg.)	1) Potential to aggravate chronic respiratory disease and respiratory symptoms in sensitive groups. 2) Risk to public health implied by pulmonary and extra-pulmonary biochemical and cellular changes and pulmonary structural changes.

Abbreviations: ppm: parts per million.
Source: California Code of Regulations, Title 17, Section 70200.

Pollutant emissions are considered to have a significant effect on the environment if they result in concentrations that create either a violation of an ambient air quality standard, contribute to an existing air quality violation or expose sensitive receptors to substantive pollutant concentrations. Should ambient air quality already exceed existing standards, the SCAQMD has established significance criteria for selected compounds to account for the continued degradation of local air quality. Background concentrations are based upon the highest observed value for the most recent three-year period.

For the CO 1 and 8-hour averaging times and the NO_2 1-hour averaging time, background concentrations are below current air quality standards. As such, significance is achieved when pollutant concentrations add to existing levels and create an exceedance of the CAAQS.

Table 5 shows the pollutant concentrations collected at the Northwest Coastal and Central Los Angeles monitoring stations for the last three years of available data. Table 6 outlines the relevant significance thresholds considered to affect local air quality.

Table 5
Air Quality Monitoring Summary

Pollutant/ Averaging Time	Year			
	2021	2022	2023	Maximum
Carbon Monoxide (CO) 1-Hour 8-Hour	1.5 1.0	1.7 1.5	1.4 1.2	1.7 1.5
Nitrogen Dioxide (NO_2) 1-Hour	0.0606	0.0514	0.0439	0.0606

Note: Concentrations are expressed in parts per million (ppm).
Source: South Coast Air Quality Management District. Historical Data by Year.

Table 6
SCAQMD Air Quality Significance Thresholds

Pollutant	Averaging Time	Pollutant Concentration
Carbon Monoxide (CO)	1/8-Hours	SCAQMD is in attainment; impacts are significant if they cause or contribute to an exceedance of the following attainment standards of 20 ppm (1-hour) and 9 ppm (8-hour).
Nitrogen Dioxide (NO_2)	1-Hour	SCAQMD is in attainment; impacts are significant if they cause or contribute to an exceedance of the following attainment standard of 0.18 ppm.

Abbreviations: ppm: parts per million.
Source: South Coast Air Quality Management District.

The maximum modeled 1-hour concentration for CO of 0.18844 parts per million (ppm) (215.80201 $\mu g/m^3$) when added to an existing background concentration of 1.7 ppm, will not cause an exceedance of the CAAQS of 20 ppm. For the 8-hour averaging time, the maximum predicted concentration of 0.12145 ppm (139.08569 $\mu g/m^3$) when added to an existing background level of 1.5 ppm, does not cause an exceedance of the CAAQS of 9 ppm.

For NO_2, the maximum 1-hour concentration of 0.01179 ppm (22.18177 $\mu g/m^3$) was predicted. This concentration, when added to a background concentration of 0.0606 ppm, will not cause an exceedance of the CAAQS of 0.18 ppm.

Conclusion

In comparison to the threshold level referenced above, carcinogenic risk estimates for the maximum exposed residential receptors did not meet or exceed the significance threshold of ten in one million (10E-06) for the 30-year exposure scenario. These findings presume adherence to mitigation measure AQ-1 outlined in the City of Santa Monica's 6th Cycle 2021-2029 Housing Element Update and compliance with California's Building Standards Code (Title 24, Part 6) which limits the infiltration of particulate emissions by installing and maintaining air filtration systems which meet and/or exceed MERV 13 filter efficiencies as defined by the American Society of Heating, Refrigerating and Air Conditioning Engineers (ASHRAE) Standard 52.2.

Table 7 outlines the removal efficiencies for each particle size range for the reported MERV filter classifications.

Table 7
Minimum Efficiency Reporting Value (MERV)
Particle Removal Efficiency (%)

MERV	Particle Size Range DPM (0.3-1.0 µm)
13	50
14	75

Note: Particle size ranges are expressed in micrometers or microns (µm) equal to 0.001 mm (0.000039 inch) and is a common unit of measure to express the thickness or diameter of microscopic objects.

For criteria pollutant exposures, maximum predicted CO and NO_2 concentrations, when added to existing background levels, did not exceed their respective ambient air quality standards whereby consideration to amend building design limiting outdoor exposures and amenity access is not warranted.

I can be reached at (818) 703-3294 should you have any questions or need additional information.

Sincerely,

Bill Piazza

Emission Rate Adjustment Worksheet

CO Emissions

Acceleration / On-Ramp (15 - 45 mph)

Emfac (gr/mi) = (emfac at average link speed x 16/60) x (0.027) x (exp (.098 x acceleration speed product)) x (60 min/hr) / (average link speed)

emfac at link speed	0.859
speed (mph)	45.0
acceleration time (sec)	18.0
acceleration rate (mph/sec)	2.50
Emfac (gr/mi)	2.043

Deceleration / Off-Ramp

*Emfac (gr/mi) = (emfac at idle speed * 1.5)*

emfac at idle speed (gr/mi)	1.893
Emfac (gr/mi)	2.840

NOX Emissions

Acceleration / On-Ramp (15 - 45 mph)

Emfac (gr/mi) = (emfac at average link speed x 16/60) x (0.027) x (exp (.098 x acceleration speed product)) x (60 min/hr) / (average link speed)

emfac at link speed	0.071
speed (mph)	45.0
acceleration time (sec)	18.0
acceleration rate (mph/sec)	2.50
Emfac (gr/mi)	0.169

Deceleration / Off-Ramp

*Emfac (gr/mi) = (emfac at idle speed * 1.5)*

emfac at idle speed (gr/mi)	0.233
Emfac (gr/mi)	0.350

Emission Rate Adjustment Worksheet

DSL Particulate Emissions

Acceleration / On-Ramp (15 - 45 mph)

Emfac (gr/mi) = (emfac at average link speed x 16/60) x (0.027) x (exp (.098 x acceleration speed product)) x (60 min/hr) / (average link speed)

emfac at link speed	0.012
speed (mph)	45.0
acceleration time (sec)	18.0
acceleration rate (mph/sec)	2.50
Emfac (gr/mi)	0.029

Deceleration / Off-Ramp

*Emfac (gr/mi) = (emfac at idle speed * 1.5)*

emfac at idle speed (gr/mi)	0.036
Emfac (gr/mi)	0.054

Emission Rate Computation

Emission Rate (gr/sec) = ((Mass Emission Rate x Volume/Baseline)/(1609.3 m/mile) x (3600 sec/hr)) x (Link Length)

Pollutant Emission Rate (gr/sec)	0.00014
Pollutant Emission Rate (gr/sec/source)	6.65E-06

SB OFF/Lincoln Boulevard (Sources S_OFF_L_1 to S_OFF_L_25)

DSL Emissions

Number of Sources	25
Link Length (meters)	305
Volume/Baseline (VPH)	5
Pollutant Mass Emission Rate (gr/mi)	0.054

Emission Rate (gr/sec) = ((Mass Emission Rate x Volume/Baseline)/(1609.3 m/mile) x (3600 sec/hr)) x (Link Length)

Pollutant Emission Rate (gr/sec)	0.00001
Pollutant Emission Rate (gr/sec/source)	5.69E-07

NB ON/Lincoln Boulevard (Sources N_ON_L_1 to N_ON_L_27)

DSL Emissions

TOG DSL Emissions

Number of Sources	27
Link Length (meters)	329
Volume/Baseline (VPH)	6
Pollutant Mass Emission Rate (gr/mi)	0.029

Emission Rate (gr/sec) = ((Mass Emission Rate x Volume/Baseline)/(1609.3 m/mile) x (3600 sec/hr)) x (Link Length)

Pollutant Emission Rate (gr/sec)	0.00001
Pollutant Emission Rate (gr/sec/source)	3.66E-07

Dispersion Model Output Summary Files

*** MODELOPTs: RegDFAULT CONC ELEV FLGPOL NODRYDPLT NOWETDPLT URBAN ADJ_U*

                                        ***   MODEL SETUP OPTIONS SUMMARY   ***
- -

** Model Options Selected:
     * Model Uses Regulatory DEFAULT Options
     * Model Is Setup For Calculation of Average CONCentration Values.
     * NO GAS DEPOSITION Data Provided.
     * NO PARTICLE DEPOSITION Data Provided.
     * Model Uses NO DRY DEPLETION. DDPLETE = F
     * Model Uses NO WET DEPLETION. WETDPLT = F
     * Stack-tip Downwash.
     * Model Accounts for ELEVated Terrain Effects.
     * Use Calms Processing Routine.
     * Use Missing Data Processing Routine.
     * No Exponential Decay.
     * Model Uses URBAN Dispersion Algorithm for the SBL for   137 Source(s),
       for Total of   1 Urban Area(s):
  Urban Population =   9818605.0 ; Urban Roughness Length = 1.000 m
     * Urban Roughness Length of 1.0 Meter Used.
     * ADJ_U*   - Use ADJ_U* option for SBL in AERMET
     * CCVR_Sub - Meteorological data includes CCVR substitutions
     * TEMP_Sub - Meteorological data includes TEMP substitutions
     * Model Accepts FLAGPOLE Receptor . Heights.
     * The User Specified a Pollutant Type of: OTHER

**Model Calculates ANNUAL Averages Only

**This Run Includes: 137 Source(s);   1 Source Group(s); and   222 Receptor(s)

               with: 0 POINT(s), including
                          0 POINTCAP(s) and   0 POINTHOR(s)
                and: 137 VOLUME source(s)
                and: 0 AREA type source(s)
                and: 0 LINE source(s)
                and: 0 RLINE/RLINEXT source(s)
                and: 0 OPENPIT source(s)
                and: 0 BUOYANT LINE source(s) with a total of   0 line(s)
                and: 0 SWPOINT source(s)

**Model Set To Continue RUNning After the Setup Testing.

**The AERMET Input Meteorological Data Version Date: 16216

**Output Options Selected:
         Model Outputs Tables of ANNUAL Averages by Receptor
         Model Outputs External File(s) of High Values for Plotting (PLOTFILE Keyword)
         Model Outputs Separate Summary File of High Ranked Values (SUMMFILE Keyword)

**NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
                                                                m for Missing Hours
                                                                b for Both Calm and Missing Hours

**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) =   53.20 ; Decay Coef. =   0.000   ; Rot. Angle =   0.0
                 Emission Units = GRAMS/SEC   ; Emission Rate Unit Factor =   0.10000E+07
                 Output Units   = MICROGRAMS/M**3

**Approximate Storage Requirements of Model =   3.6 MB of RAM.

**Input Runstream File: E:\WD Passport\1640 5th street\model\DPM_2012-2016_FIRST.DTA
**Output Print File: E:\WD Passport\1640 5th street\model\DPM_2012-2016_FIRST.LST

**File for Summary of Results: E:\WD Passport\1640 5th street\model\DPM_2012-2016_FIRST.SUM

                                        ***   MODEL SETUP OPTIONS SUMMARY   ***
- -

** Model Options Selected:
     * Model Uses Regulatory DEFAULT Options
     * Model Is Setup For Calculation of Average CONCentration Values.
     * NO GAS DEPOSITION Data Provided.
     * NO PARTICLE DEPOSITION Data Provided.
     * Model Uses NO DRY DEPLETION. DDPLETE = F
     * Model Uses NO WET DEPLETION. WETDPLT = F
     * Stack-tip Downwash.
     * Model Accounts for ELEVated Terrain Effects.
     * Use Calms Processing Routine.
     * Use Missing Data Processing Routine.
     * No Exponential Decay.
     * Model Uses URBAN Dispersion Algorithm for the SBL for   137 Source(s),
       for Total of   1 Urban Area(s):
  Urban Population =   9818605.0 ; Urban Roughness Length = 1.000 m
     * Urban Roughness Length of 1.0 Meter Used.
     * ADJ_U*   - Use ADJ_U* option for SBL in AERMET
     * CCVR_Sub - Meteorological data includes CCVR substitutions
     * TEMP_Sub - Meteorological data includes TEMP substitutions
     * Model Accepts FLAGPOLE Receptor . Heights.
     * The User Specified a Pollutant Type of: OTHER

**Model Calculates ANNUAL Averages Only

**This Run Includes: 137 Source(s);   1 Source Group(s); and   222 Receptor(s)

               with: 0 POINT(s), including
                          0 POINTCAP(s) and   0 POINTHOR(s)
                and: 137 VOLUME source(s)
                and: 0 AREA type source(s)
                and: 0 LINE source(s)
                and: 0 RLINE/RLINEXT source(s)
                and: 0 OPENPIT source(s)
                and: 0 BUOYANT LINE source(s) with a total of   0 line(s)
                and: 0 SWPOINT source(s)

**Model Set To Continue RUNning After the Setup Testing.

**The AERMET Input Meteorological Data Version Date: 16216

**Output Options Selected:
         Model Outputs Tables of ANNUAL Averages by Receptor
         Model Outputs External File(s) of High Values for Plotting (PLOTFILE Keyword)
         Model Outputs Separate Summary File of High Ranked Values (SUMMFILE Keyword)

**NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
                                                                m for Missing Hours
                                                                b for Both Calm and Missing Hours

**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) =   53.20 ; Decay Coef. =   0.000   ; Rot. Angle =   0.0
                 Emission Units = GRAMS/SEC   ; Emission Rate Unit Factor =   0.10000E+07
                 Output Units   = MICROGRAMS/M**3

**Approximate Storage Requirements of Model =   3.6 MB of RAM.

**Input Runstream File: E:\WD Passport\1640 5th street\model\DPM_2012-2016_SECOND.DTA
**Output Print File: E:\WD Passport\1640 5th street\model\DPM_2012-2016_SECOND.LST

**File for Summary of Results: E:\WD Passport\1640 5th street\model\DPM_2012-2016_SECOND.SUM

                                        ***   MODEL SETUP OPTIONS SUMMARY   ***
- -

** Model Options Selected:
     * Model Uses Regulatory DEFAULT Options
     * Model Is Setup For Calculation of Average CONCentration Values.
     * NO GAS DEPOSITION Data Provided.
     * NO PARTICLE DEPOSITION Data Provided.
     * Model Uses NO DRY DEPLETION. DDPLETE = F
     * Model Uses NO WET DEPLETION. WETDPLT = F
     * Stack-tip Downwash.
     * Model Accounts for ELEVated Terrain Effects.
     * Use Calms Processing Routine.
     * Use Missing Data Processing Routine.
     * No Exponential Decay.
     * Model Uses URBAN Dispersion Algorithm for the SBL for   137 Source(s),
       for Total of   1 Urban Area(s):
  Urban Population =   9818605.0 ; Urban Roughness Length = 1.000 m
     * Urban Roughness Length of 1.0 Meter Used.
     * ADJ_U*   - Use ADJ_U* option for SBL in AERMET
     * CCVR_Sub - Meteorological data includes CCVR substitutions
     * TEMP_Sub - Meteorological data includes TEMP substitutions
     * Model Accepts FLAGPOLE Receptor . Heights.
     * The User Specified a Pollutant Type of: OTHER

**Model Calculates ANNUAL Averages Only

**This Run Includes: 137 Source(s);   1 Source Group(s); and   222 Receptor(s)

               with: 0 POINT(s), including
                          0 POINTCAP(s) and   0 POINTHOR(s)
                and: 137 VOLUME source(s)
                and: 0 AREA type source(s)
                and: 0 LINE source(s)
                and: 0 RLINE/RLINEXT source(s)
                and: 0 OPENPIT source(s)
                and: 0 BUOYANT LINE source(s) with a total of   0 line(s)
                and: 0 SWPOINT source(s)

**Model Set To Continue RUNning After the Setup Testing.

**The AERMET Input Meteorological Data Version Date: 16216

**Output Options Selected:
         Model Outputs Tables of ANNUAL Averages by Receptor
         Model Outputs External File(s) of High Values for Plotting (PLOTFILE Keyword)
         Model Outputs Separate Summary File of High Ranked Values (SUMMFILE Keyword)

**NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
                                                                m for Missing Hours
                                                                b for Both Calm and Missing Hours

**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) =   53.20 ; Decay Coef. =   0.000   ; Rot. Angle =   0.0
                 Emission Units = GRAMS/SEC   ; Emission Rate Unit Factor =   0.10000E+07
                 Output Units   = MICROGRAMS/M**3

**Approximate Storage Requirements of Model =   3.6 MB of RAM.

**Input Runstream File: E:\WD Passport\1640 5th street\model\DPM_2012-2016_THIRD.DTA
**Output Print File: E:\WD Passport\1640 5th street\model\DPM_2012-2016_THIRD.LST

**File for Summary of Results: E:\WD Passport\1640 5th street\model\DPM_2012-2016_THIRD.SUM

                                        ***   MODEL SETUP OPTIONS SUMMARY   ***
- -

** Model Options Selected:
     * Model Uses Regulatory DEFAULT Options
     * Model Is Setup For Calculation of Average CONCentration Values.
     * NO GAS DEPOSITION Data Provided.
     * NO PARTICLE DEPOSITION Data Provided.
     * Model Uses NO DRY DEPLETION. DDPLETE = F
     * Model Uses NO WET DEPLETION. WETDPLT = F
     * Stack-tip Downwash.
     * Model Accounts for ELEVated Terrain Effects.
     * Use Calms Processing Routine.
     * Use Missing Data Processing Routine.
     * No Exponential Decay.
     * Model Uses URBAN Dispersion Algorithm for the SBL for   137 Source(s),
       for Total of   1 Urban Area(s):
  Urban Population =   9818605.0 ; Urban Roughness Length = 1.000 m
     * Urban Roughness Length of 1.0 Meter Used.
     * ADJ_U*   - Use ADJ_U* option for SBL in AERMET
     * CCVR_Sub - Meteorological data includes CCVR substitutions
     * TEMP_Sub - Meteorological data includes TEMP substitutions
     * Model Accepts FLAGPOLE Receptor . Heights.
     * The User Specified a Pollutant Type of: OTHER

**Model Calculates ANNUAL Averages Only

**This Run Includes: 137 Source(s);   1 Source Group(s); and   222 Receptor(s)

               with: 0 POINT(s), including
                          0 POINTCAP(s) and   0 POINTHOR(s)
                and: 137 VOLUME source(s)
                and: 0 AREA type source(s)
                and: 0 LINE source(s)
                and: 0 RLINE/RLINEXT source(s)
                and: 0 OPENPIT source(s)
                and: 0 BUOYANT LINE source(s) with a total of   0 line(s)
                and: 0 SWPOINT source(s)

**Model Set To Continue RUNning After the Setup Testing.

**The AERMET Input Meteorological Data Version Date: 16216

**Output Options Selected:
         Model Outputs Tables of ANNUAL Averages by Receptor
         Model Outputs External File(s) of High Values for Plotting (PLOTFILE Keyword)
         Model Outputs Separate Summary File of High Ranked Values (SUMMFILE Keyword)

**NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
                                                                m for Missing Hours
                                                                b for Both Calm and Missing Hours

**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) =   53.20 ; Decay Coef. =   0.000   ; Rot. Angle =   0.0
                 Emission Units = GRAMS/SEC   ; Emission Rate Unit Factor =   0.10000E+07
                 Output Units   = MICROGRAMS/M**3

**Approximate Storage Requirements of Model =   3.6 MB of RAM.

**Input Runstream File: E:\WD Passport\1640 5th street\model\DPM_2012-2016_FOURTH.DTA
**Output Print File: E:\WD Passport\1640 5th street\model\DPM_2012-2016_FOURTH.LST

**File for Summary of Results: E:\WD Passport\1640 5th street\model\DPM_2012-2016_FOURTH.SUM

- -

** Model Options Selected:
     * Model Uses Regulatory DEFAULT Options
     * Model Is Setup For Calculation of Average CONCentration Values.
     * NO GAS DEPOSITION Data Provided.
     * NO PARTICLE DEPOSITION Data Provided.
     * Model Uses NO DRY DEPLETION. DDPLETE = F
     * Model Uses NO WET DEPLETION. WETDPLT = F
     * Stack-tip Downwash.
     * Model Accounts for ELEVated Terrain Effects.
     * Use Calms Processing Routine.
     * Use Missing Data Processing Routine.
     * No Exponential Decay.
     * Model Uses URBAN Dispersion Algorithm for the SBL for   137 Source(s),
       for Total of   1 Urban Area(s):
  Urban Population =   9818605.0 ; Urban Roughness Length = 1.000 m
     * Urban Roughness Length of 1.0 Meter Used.
     * ADJ_U*   - Use ADJ_U* option for SBL in AERMET
     * CCVR_Sub - Meteorological data includes CCVR substitutions
     * TEMP_Sub - Meteorological data includes TEMP substitutions
     * Model Accepts FLAGPOLE Receptor . Heights.
     * The User Specified a Pollutant Type of: OTHER

**Model Calculates ANNUAL Averages Only

                                        ***   MODEL SETUP OPTIONS SUMMARY   ***
- -

** Model Options Selected:
     * Model Uses Regulatory DEFAULT Options
     * Model Is Setup For Calculation of Average CONCentration Values.
     * NO GAS DEPOSITION Data Provided.
     * NO PARTICLE DEPOSITION Data Provided.
     * Model Uses NO DRY DEPLETION. DDPLETE = F
     * Model Uses NO WET DEPLETION. WETDPLT = F
     * Stack-tip Downwash.
     * Model Accounts for ELEVated Terrain Effects.
     * Use Calms Processing Routine.
     * Use Missing Data Processing Routine.
     * No Exponential Decay.
     * Model Uses URBAN Dispersion Algorithm for the SBL for   137 Source(s),
       for Total of   1 Urban Area(s):
  Urban Population =   9818605.0 ; Urban Roughness Length = 1.000 m
     * Urban Roughness Length of 1.0 Meter Used.
     * ADJ_U*   - Use ADJ_U* option for SBL in AERMET
     * CCVR_Sub - Meteorological data includes CCVR substitutions
     * TEMP_Sub - Meteorological data includes TEMP substitutions
     * Model Accepts FLAGPOLE Receptor . Heights.
     * The User Specified a Pollutant Type of: OTHER

**Model Calculates ANNUAL Averages Only

**This Run Includes: 137 Source(s);   1 Source Group(s); and   222 Receptor(s)

               with: 0 POINT(s), including
                          0 POINTCAP(s) and   0 POINTHOR(s)
                and: 137 VOLUME source(s)
                and: 0 AREA type source(s)
                and: 0 LINE source(s)
                and: 0 RLINE/RLINEXT source(s)
                and: 0 OPENPIT source(s)
                and: 0 BUOYANT LINE source(s) with a total of   0 line(s)
                and: 0 SWPOINT source(s)

**Model Set To Continue RUNning After the Setup Testing.

**The AERMET Input Meteorological Data Version Date: 16216

**Output Options Selected:
         Model Outputs Tables of ANNUAL Averages by Receptor
         Model Outputs External File(s) of High Values for Plotting (PLOTFILE Keyword)
         Model Outputs Separate Summary File of High Ranked Values (SUMMFILE Keyword)

**NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
                                                                m for Missing Hours
                                                                b for Both Calm and Missing Hours

**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) =   53.20 ; Decay Coef. =   0.000   ; Rot. Angle =   0.0
                 Emission Units = GRAMS/SEC   ; Emission Rate Unit Factor =   0.10000E+07
                 Output Units   = MICROGRAMS/M**3

**Approximate Storage Requirements of Model =   3.6 MB of RAM.

**Input Runstream File: E:\WD Passport\1640 5th street\model\DPM_2012-2016_SEVENTH.DTA
**Output Print File: E:\WD Passport\1640 5th street\model\DPM_2012-2016_SEVENTH.LST

**File for Summary of Results: E:\WD Passport\1640 5th street\model\DPM_2012-2016_SEVENTH.SUM

                                        ***   MODEL SETUP OPTIONS SUMMARY   ***
- -

** Model Options Selected:
     * Model Uses Regulatory DEFAULT Options
     * Model Is Setup For Calculation of Average CONCentration Values.
     * NO GAS DEPOSITION Data Provided.
     * NO PARTICLE DEPOSITION Data Provided.
     * Model Uses NO DRY DEPLETION. DDPLETE = F
     * Model Uses NO WET DEPLETION. WETDPLT = F
     * Stack-tip Downwash.
     * Model Accounts for ELEVated Terrain Effects.
     * Use Calms Processing Routine.
     * Use Missing Data Processing Routine.
     * No Exponential Decay.
     * Model Uses URBAN Dispersion Algorithm for the SBL for   137 Source(s),
       for Total of   1 Urban Area(s):
  Urban Population =   9818605.0 ; Urban Roughness Length = 1.000 m
     * Urban Roughness Length of 1.0 Meter Used.
     * ADJ_U*   - Use ADJ_U* option for SBL in AERMET
     * CCVR_Sub - Meteorological data includes CCVR substitutions
     * TEMP_Sub - Meteorological data includes TEMP substitutions
     * Model Accepts FLAGPOLE Receptor . Heights.
     * The User Specified a Pollutant Type of: OTHER

**Model Calculates ANNUAL Averages Only

**This Run Includes: 137 Source(s);   1 Source Group(s); and   222 Receptor(s)

               with: 0 POINT(s), including
                          0 POINTCAP(s) and   0 POINTHOR(s)
                and: 137 VOLUME source(s)
                and: 0 AREA type source(s)
                and: 0 LINE source(s)
                and: 0 RLINE/RLINEXT source(s)
                and: 0 OPENPIT source(s)
                and: 0 BUOYANT LINE source(s) with a total of   0 line(s)
                and: 0 SWPOINT source(s)

**Model Set To Continue RUNning After the Setup Testing.

**The AERMET Input Meteorological Data Version Date: 16216

**Output Options Selected:
         Model Outputs Tables of ANNUAL Averages by Receptor
         Model Outputs External File(s) of High Values for Plotting (PLOTFILE Keyword)
         Model Outputs Separate Summary File of High Ranked Values (SUMMFILE Keyword)

**NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
                                                                m for Missing Hours
                                                                b for Both Calm and Missing Hours

**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) =   53.20 ; Decay Coef. =   0.000   ; Rot. Angle =   0.0
                 Emission Units = GRAMS/SEC   ; Emission Rate Unit Factor =   0.10000E+07
                 Output Units   = MICROGRAMS/M**3

**Approximate Storage Requirements of Model =   3.6 MB of RAM.

**Input Runstream File: E:\WD Passport\1640 5th street\model\DPM_2012-2016_EIGHTH.DTA
**Output Print File: E:\WD Passport\1640 5th street\model\DPM_2012-2016_EIGHTH.LST

**File for Summary of Results: E:\WD Passport\1640 5th street\model\DPM_2012-2016_EIGHTH.SUM

                                        ***   MODEL SETUP OPTIONS SUMMARY   ***
- -

** Model Options Selected:
     * Model Uses Regulatory DEFAULT Options
     * Model Is Setup For Calculation of Average CONCentration Values.
     * NO GAS DEPOSITION Data Provided.
     * NO PARTICLE DEPOSITION Data Provided.
     * Model Uses NO DRY DEPLETION. DDPLETE = F
     * Model Uses NO WET DEPLETION. WETDPLT = F
     * Stack-tip Downwash.
     * Model Accounts for ELEVated Terrain Effects.
     * Use Calms Processing Routine.
     * Use Missing Data Processing Routine.
     * No Exponential Decay.
     * Model Uses URBAN Dispersion Algorithm for the SBL for   137 Source(s),
       for Total of   1 Urban Area(s):
  Urban Population =   9818605.0 ; Urban Roughness Length = 1.000 m
     * Urban Roughness Length of 1.0 Meter Used.
     * ADJ_U*   - Use ADJ_U* option for SBL in AERMET
     * CCVR_Sub - Meteorological data includes CCVR substitutions
     * TEMP_Sub - Meteorological data includes TEMP substitutions
     * Model Accepts FLAGPOLE Receptor . Heights.
     * The User Specified a Pollutant Type of: OTHER

**Model Calculates 2 Short Term Average(s) of: 1-HR   8-HR

**This Run Includes: 137 Source(s);   1 Source Group(s); and   222 Receptor(s)

               with: 0 POINT(s), including
                          0 POINTCAP(s) and   0 POINTHOR(s)
                and: 137 VOLUME source(s)
                and: 0 AREA type source(s)
                and: 0 LINE source(s)
                and: 0 RLINE/RLINEXT source(s)
                and: 0 OPENPIT source(s)
                and: 0 BUOYANT LINE source(s) with a total of   0 line(s)
                and: 0 SWPOINT source(s)

**Model Set To Continue RUNning After the Setup Testing.

**The AERMET Input Meteorological Data Version Date: 16216

**Output Options Selected:
         Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE Keyword)
         Model Outputs External File(s) of High Values for Plotting (PLOTFILE Keyword)
         Model Outputs Separate Summary File of High Ranked Values (SUMMFILE Keyword)

**NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
                                                                m for Missing Hours
                                                                b for Both Calm and Missing Hours

**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) =   53.20 ; Decay Coef. =   0.000   ; Rot. Angle =   0.0
                 Emission Units = GRAMS/SEC   ; Emission Rate Unit Factor =   0.10000E+07
                 Output Units   = MICROGRAMS/M**3

**Approximate Storage Requirements of Model =   3.6 MB of RAM.

**Input Runstream File: E:\WD Passport\1640 5th street\model\CO_2012-2016_FIRST.DTA
**Output Print File: E:\WD Passport\1640 5th street\model\CO_2012-2016_FIRST.LST

**File for Summary of Results: E:\WD Passport\1640 5th street\model\CO_2012-2016_FIRST.SUM

                                        ***   MODEL SETUP OPTIONS SUMMARY   ***
- -

** Model Options Selected:
     * Model Uses Regulatory DEFAULT Options
     * Model Is Setup For Calculation of Average CONCentration Values.
     * NO GAS DEPOSITION Data Provided.
     * NO PARTICLE DEPOSITION Data Provided.
     * Model Uses NO DRY DEPLETION. DDPLETE = F
     * Model Uses NO WET DEPLETION. WETDPLT = F
     * Stack-tip Downwash.
     * Model Accounts for ELEVated Terrain Effects.
     * Use Calms Processing Routine.
     * Use Missing Data Processing Routine.
     * No Exponential Decay.
     * Ambient Ratio Method Ver 2 (ARM2) Used for NO2 Conversion
        with a Minimum NO2/NOx Ratio of 0.500
        and a Maximum NO2/NOx Ratio of 0.900
     * Model Uses URBAN Dispersion Algorithm for the SBL for   137 Source(s),
       for Total of   1 Urban Area(s):
  Urban Population =   9818605.0 ; Urban Roughness Length = 1.000 m
     * Urban Roughness Length of 1.0 Meter Used.
     * ADJ_U*   - Use ADJ_U* option for SBL in AERMET
     * CCVR_Sub - Meteorological data includes CCVR substitutions
     * TEMP_Sub - Meteorological data includes TEMP substitutions
     * Model Accepts FLAGPOLE Receptor . Heights.
     * The User Specified a Pollutant Type of: NO2

**NOTE: Special processing requirements applicable for the 1-hour NO2 NAAQS have been disabled!!!
        User has specified H1H on the POLLUTID keyword.
        High ranked 1-hour values are NOT averaged across the number of years modeled, and
        complete years of data are NOT required.

**Model Calculates 1 Short Term Average(s) of: 1-HR

**This Run Includes: 137 Source(s);   1 Source Group(s); and   222 Receptor(s)

               with: 0 POINT(s), including
                          0 POINTCAP(s) and   0 POINTHOR(s)
                and: 137 VOLUME source(s)
                and: 0 AREA type source(s)
                and: 0 LINE source(s)
                and: 0 RLINE/RLINEXT source(s)
                and: 0 OPENPIT source(s)
                and: 0 BUOYANT LINE source(s) with a total of   0 line(s)
                and: 0 SWPOINT source(s)

**Model Set To Continue RUNning After the Setup Testing.

**The AERMET Input Meteorological Data Version Date: 16216

**Output Options Selected:
         Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE Keyword)
         Model Outputs External File(s) of High Values for Plotting (PLOTFILE Keyword)
         Model Outputs Separate Summary File of High Ranked Values (SUMMFILE Keyword)

**NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
                                                                m for Missing Hours
                                                                b for Both Calm and Missing Hours

**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) =   53.20 ; Decay Coef. =   0.000   ; Rot. Angle =   0.0
                 Emission Units = GRAMS/SEC   ; Emission Rate Unit Factor =   0.10000E+07
                 Output Units   = MICROGRAMS/M**3

**Approximate Storage Requirements of Model =   3.6 MB of RAM.

**Input Runstream File: E:\WD Passport\1640 5th street\model\NO2_2012-2016_NO2.DTA
**Output Print File: E:\WD Passport\1640 5th street\model\NO2_2012-2016_NO2.LST

NOTICE OF A VIRTUAL COMMUNITY MEETING

1640 5th Street, Santa Monica, CA

Subject: Proposed Multi-Family Housing Project

Date: July 8, 2024

Time: 6:00 p.m.-8:00 p.m.

Place: The meeting will be held virtually via Zoom. To join the meeting please follow the link below or send a request to the following email address for the meeting link to join and it will be sent directly to you: info@1640fifth.com A clickable Zoom link is available at: https://1640fifth.com/

https://us06web.zoom.us/j/84889511878?pwd=Y0OQMybQqJ4TDz9cBMhgUoHwGUES3T.1

Purpose: The purpose of this meeting is to present information about the proposed project and collect feedback and input from surrounding property owners/residents so that any issues raised may be considered before a formal application is submitted to the City of Santa Monica Planning Division. Project representatives such as the owner/developer, architect and consultant will be present to answer any questions.

Project Location: 1640 5th Street, Santa Monica, CA (see map on reverse)

Project Description: Proposed 8-story residential building with a total of 132 residential units (15 deed-restricted affordable units) and three (3) levels of subterranean parking providing a total of 132 parking stalls with electric vehicle charging stations and bicycle parking.

For more information on the project and to view project renderings, please visit the project website:

https://1640fifth.com/

You received notice of this meeting because you are a tenant or owner of property within 750 feet of the subject property. Please note this meeting will be an informational meeting on preliminary development plans. These plans may be altered prior to submittal of a formal application to the City of Santa Monica. We look forward to more specifically discussing the proposed project with you.

Please direct written statements, requests, and other communications to the project email address at: info@1640fifth.com

1640 5th Street Project

Virtual Community Meeting

July 8, 2024

6:00 PM – 8:00 PM (scheduled) 6:05 PM-6:19 PM (duration)

A. Noticing

A postcard Notice of Community meeting was made 14 days prior to the meeting via USPS to owners and occupants within a 750-foot radius of the project site. A copy of the postcard notification is attached.

The Notice of Community Meeting with the meeting Zoom link appeared on the on-site signage, as well as on the home page of the project website: 1640fifth.com/. An email link was also provided on the website for meeting RSVPs and requests for more information.

B. Attendees

Project Team

1. Justin Cua, Lincoln Property Company (applicant)
2. Drew Stelling, Lincoln Property Company (applicant)
3. Sophia Benamar Lincoln Property Company (applicant)
4. Stephen Lindgren, Lincoln Property Company (applicant)
5. Jonathan Watts, KFA (architect)
6. Tricia Hamachai. KFA (architect)
7. Azi Sadrieh, KFA (architect)
8. Michael Rocque, Rand Paster & Nelson (land use consultant)
9. Vicente Arellano, Rand Paster & Nelson (land use consultant)

Members of the Public (by screen names)

[None in attendance]

C. Presentation

Michael Rocque called the meeting to order at 6:05 and described the meeting agenda and ways the participants can have their questions and comments addressed.

Justin Cua introduced himself and provided a brief overview of the Project, and introduced Jonathan Watts, KFA Architects.

Jonathan Watts provided a verbal description of the project, accompanied by visuals consisting of site location, renderings, site plan, floor plans, parking, circulation, design elements, outdoor spaces, design, ground floor landscaping, and anticipated amenities, such as a co-working space, pool and community room.

Michael Rocque ended the meeting and provided additional information to the public on ways to still provide comments through the project email and website and that the presentation will be uploaded to the website for viewing.

D. Question and Answer Period

The live Q&A started after the presentation. No members of the public joined.

E. Summary of Comments and responses

No comments were received during the meeting.

F. <u>Zoom Chat</u>

No chat comments were received during the meeting.

G. Notification of Community Meeting
